

GT1500 Automatic or Manual Convenience Window

The exclusive line of Convenience Window Systems from Gyro Tech by NABCO Entrances Inc. brings the most reliable and durable product to the industry. By combining high quality and lowest life-cycle cost with ease of use and maintenance, we meet the tough demands for any drive-through and in-house service area environment, including fast food restaurants, lumber yards, home improvement stores, pharmacies, banks, guard stations, retail stores, and liquor stores.

The automatic version uses a sophisticated microprocessor control by NABCO. The control and Handy Terminal programming tool provide expanded operational control parameters, such as opening/closing speeds and hold-open time, plus valuable maintenance data, including cycle count and error codes. It offers over 24 operational functions with more than 112 different options via the Handy Terminal. The microprocessor control provides a history report of service calls, operational cycles, recycles, and self-diagnostic information.

PRODUCT FEATURES:

- Bi-parting or single-slide configurations in either automatic or manual operation
- Available in multiple finishes
- Low-voltage motor is quiet, safe, and uses less energy
- Automatic windows maintain constant speed control
- Interior-mounted push switch on jamb, and thumb-turn lock on door
- Convenient "hold-close" option
- Adjustable opening and closing speeds, time delay, soft start, back check and latch check
- Four settings for recycle sensitivity
- No window position switches means reduced maintenance
- Easy interface with remote monitoring and security equipment
- Seven controller diagnostic LEDs for easy troubleshooting
- Microfiber-reinforced belt drive tested to operate quietly in extreme temperatures for millions of cycles
- Sealed bearing and urethane-covered rollers for extremely quiet, reliable operation
- Heavy-duty, anodized aluminum roller track for smooth operation
- Rocker switch for power "on" or "off"

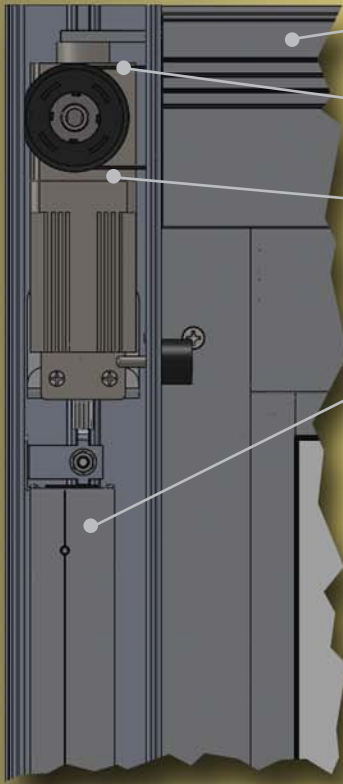

- Power to header 115 VAC 5 AMP
- Class 2 power supply included
- Includes dedicated input for optional activation devices
- Double-pile weatherstripping keeps inclement weather outside
- Can accept glass/glazing from 1/4" to 1"
- Brushless motor for quiet operation and extra-long life
- Additional information available at www.nabcoentrances.com

APPROVALS:

All features, components and accessories are UL and cUL approved.

GT1500 Automatic or Manual Convenience Window

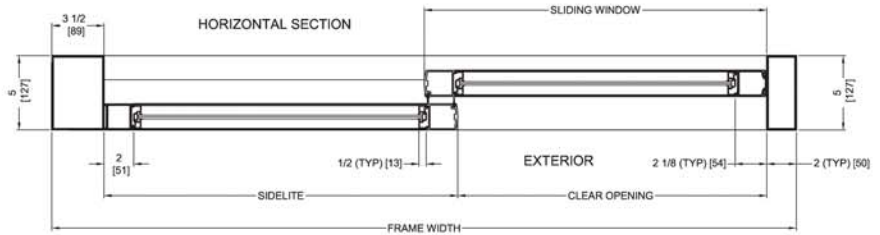

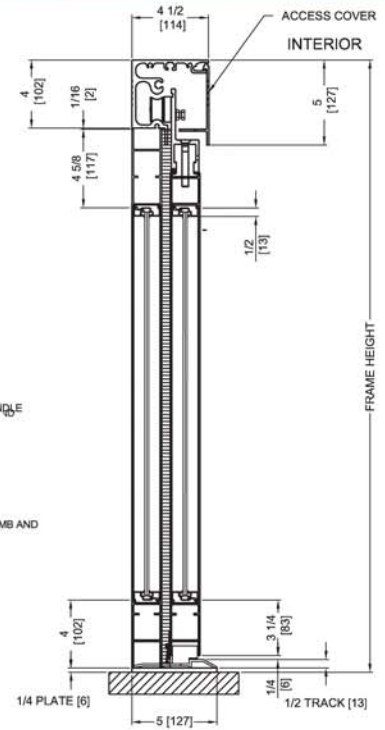

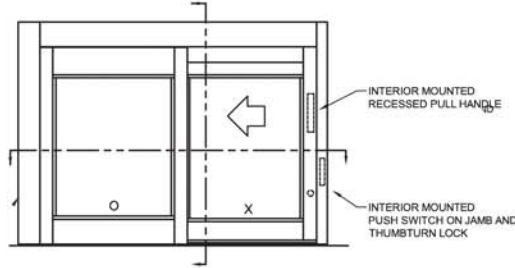

Assembly cutaway

- Header and operator covers open for ease of maintenance.
- Micro-fiber reinforced belt drive is quiet and trouble-free.
- Low-voltage brushless motor is very quiet and long-lasting, and has been tested to over 1,000,000 cycles.
- Microprocessor control for easy set-up, cycle count and consistent operation.

- HD-anodized aluminum roller track and sealed bearing/urethane-covered rollers deliver smooth operation for millions of cycles in any type of weather.

GT1500-01L-A, automatic single-slide window

Handy Terminal

NABCO's state-of-the-art microprocessor and 24 VDC brushless operator interface seamlessly with all Gyro Tech convenience windows, resulting in a reliable product with a lower total cost of ownership. The microprocessor's "hold-close" option reduces unwanted window movement even under extremely windy conditions. The speeds for opening, closing, back checks and latch checks are all independently adjustable. Time delays, sequential operation, "Power On," and a range of other important features are available. Multiple open/close systems are available for the automatic window, including sensors, beams, hip switches and floor switches. The automatic convenience window is standard with a jamb-mounted, stainless steel open/close push switch.

The entire line is designed for ease of installation, maintenance and use. Building store managers and building owners will love the durability and low cost of ownership. This line delivers a promise of ease of operation, reliability and long life.

"It's sealed much better than the previous unit we had. There are NO drafts compared to the previous one from another manufacturer, which rattled a lot with the wind and was very drafty. Our people are more comfortable due to reduced drafts. It looks great. It's sleek, not bulky at all, but it's really solid. . . you can just feel it. I can't believe how much the other guys wanted just to fix their unit. And how long it was going to take!"

Karen Sorrel, Manager, "Culver's", Muskego, Wisconsin
